

Cancer Awareness & Support web page

Project Overview

This project is a **simple, responsive web page** designed to raise awareness about cancer, provide support, and connect survivors, caregivers, and allies. The page is visually appealing, mobile-friendly, and includes a **landing section, banner image, and a contact form**.

Project Features

1. Landing Page

- Large banner with a **background image** of hope and support.
- Short impactful **message**: “You’re not alone — support, resources, and hope.”
- Responsive design for desktop, tablet, and mobile.

2. Contact Form

- **Fields**: Name, Email, Message.
- Accessible and responsive design.

3. Information Cards

- **About Card**: Provides context for the website and its purpose.
- **Quick Links Card**: Placeholder for links to support groups, resources, and volunteering/donation opportunities.

4. Header & Navigation

- Logo and project name displayed in the top left.
- Clean, minimal design to focus on content.

5. Footer

- Simple, clean footer design with project attribution.
-

Technical Details

HTML

- Uses **semantic HTML5 elements**: <header>, <main>, <section>, <footer>.
- Includes accessible attributes such as aria-labelledby for form sections.

CSS

- **Flexbox** and **CSS Grid** for layout and responsive design.
- Responsive adjustments using **media queries** for screens under 880px and 420px.

JavaScript

- Updates **current year** in footer automatically.

Hosted on GitHub Pages

User Experience

- Fully **responsive** for mobile, tablet, and desktop.
 - Easy-to-read typography and accessible colour contrast.
 - Clear call-to-action encourages engagement.
-

Future Enhancements

1. **Backend Integration**
 - Store form submissions in a database.
 - Send email notifications when a message is received.
 2. **Dynamic Content**
 - Pull resources or news feeds from verified cancer support organizations.
-

Project Structure:

cancer-awareness

```
├── index.html    # Main landing page with hero, cards, and form
├── readme.md
```

How to Run

1. Open index.html in a web browser.
 2. Test the **form** by entering a name, email, and message. The success message will appear without any backend.
 3. Resize the browser window to see the responsive design in action.
-

Conclusion

This project is a **starter template for cancer awareness and support websites**, focusing on **responsive design, user-friendly interactions, and clean visuals**.
